

A new 120tph **SATAREM Discharge System** with controlled flow was installed and satisfactorily commissioned on a White Cement plant located in Colombia, Latin America.

The set of equipment included includes a distribution box, two flow valves controlled by Servomotor **BERNARD CONTROLS FRANCE** and a manual valve for maintenance.

Better reliability

With the new system our client has improved the control in loading time of and filling bags.

To guarantee the effectiveness and provide maximum reliability SATAREM supplied actuators **Bernard Controls France**.

SATAREM Control Flow Valves	
Product	Cement
Output	120 tph
Control	Servomotor
Actuator	Bernard Controls France
Valve main body	SATAREM

Shorter Delivery Time

The execution and delivery of the equipment was completed in only **45 days** after the Client's approval of drawings.

Superior Quality

The SATAREM control valves are made of high wear resistance steel and comply with international standards (ISO), increasing the lifespan of our equipment.

Upgrades & Greenfield projects

SATAREM executes up-grades and supplies equipment and spare parts for maintenance of complete cement plants or for individual systems.

Based on our practical experience in operation and the use of well-developed technologies, we supply equipment and services adapted to the specific needs of the client, improving the efficiency of their plant.

Contact our specialists for an evaluation of your system and needs for loading and transport of materials.
